Shock-absorbing
rear step

GR-1400-SA

Shock-absorbing rear step

Wide step for rear access to the vehicle. It features a shock-absorbing system in the event of an impact with an obstacle when reversing.

Regardless of the impact point, the step retracts elastically. After compression, it returns to the original position. Ideal for vehicles operating in extreme environmental conditions with the presence of mud, snow and ice, the step is made of a light alloy with cathaphoresis protection.

The perforated double-drawn surface is an excellent drainage system for any kind of slippery element and at the same time guarantees an effective anti-slip system thanks to the high friction coefficient.

It uses the vehicle's original parking sensors.

Aluminium footboard with **R12** anti-slip level (upon request).

250 kg

Shock-absorbing stroke: 100mm

1400X240mm

2006/42/EU

18,9 kg

Low temperature operation test -20°C
